

MANAGED MACHINE NETWORK

# A NEW WAY TO CONNECT YOUR MACHINES SAFE & EASY!?

**"MMN developed the first scalable automated machine network. With the convenience of plug&play, but built to the highest cybersecurity standards!"**

We have created a fully automated VPN network that has a plug & play and foolproof system. By just connecting our modem to the internet via LAN or 4G, MMN automatically creates your own VPN server, which also automatically connects to all your devices in the network.

# OWNING INDEPENDENCE

MMN was created with the idea of being brand independent, so you can connect to any machine, protocol or server. Easily connect your existing systems, whether this is a billing system or a SCADA solution.

MMN automatically sets up your own VPN server for you. This makes you the owner of all data collected in the machine network. With this data you can:

- Create live dashboards**
- Carry out preventive maintenance**
- Create better algorithms & models**
- Deploy alerts & notifications**

From the beginning, we developed MMN as a security product. We have automated these safety aspects so that it can be rolled out at scale and avoid human error.

# SECURITY BY DESIGN

Add TAGS to users or machines to give access.

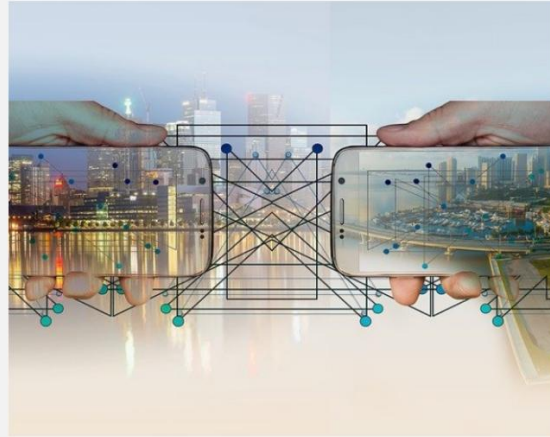

This way, you can even give customers from your clients access to the selected machines.

Behind this feature runs a powerful software that automatically creates firewall rules across the entire network.

# UNIQUE CONNECTION

MMN has developed its own way of connecting. Products currently in use can only connect in an ad hoc manner. You have to log into a modem and manually build a VPN tunnel. MMN does it differently.

With our unique way of connecting, we build a real-time, bi-directional & continuous connection with all modems and machines inside your network. This is a totally different approach. Through this innovation we can add features that were not possible before. For example, we can update hundreds of PLCs automatically and simultaneously.

## Why our clients only use MMN?!

With MMN you don't only have unlimited options & unique features, but you can also save time & money!

**90%**

Save 90% installing time

**100+**

Save more than 100 hours engineering

**1st**

The first fully automated VPN machine network

**∞**

Connect infinite machines & locations
