De Challenge

Critical technical systems and assets are vital for proper functioning of our society. The owners' licenses to operate depend on their ability to deal with grand changing societal challenges. Already owners/operators/service providers of these large technical assets are stretched in their capabilities to utilize, maintain, renew and dispose their assets. Their asset management and maintenance capabilities are key.

De Solution

The Asset Management and Maintenance Innovation Centre develops knowledge, competences, and capabilities to help organisations to propel to innovative, sustainable advanced technologies and concepts. It offers transformative research, education and knowledge dissemination through co creation and a cross disciplinary approach in a network of researchers and asset owners, operators and service providers. [Watch the innovation pitch from Univerity of Twente here.](#)
