## De Challenge

How can you safely and conveniently monitor your rotating equipment's operating conditions so you can better allocate resources to avoid unplanned downtime and asset failure?

## De Solution

[Chesterton](#) Connect is a simple to use data acquisition tool that enables you to safely and conveniently monitor your process and equipment's operating conditions. Using Bluetooth® technology and a robust design to withstand harsh environments, Chesterton Connect makes it easy to monitor: equipment vibration, surface temperature, process temperature?? and process pressure? all in one single unit. Combined with the user-friendly and cloud connected app allows you to connect to multiple sensors,? providing you with a comprehensive view of your plant's equipment health.

## De Businesscase

Chesterton Connect provides 24/7 early detection of equipment and process instabilities saving time and money on unscheduled work and inspections.
